

# Waste Management

KpH Environmental delivers a wide range of waste management services for clients operating in a variety of sectors, including pharmaceutical, manufacturing, industrial, commercial, public service and construction industries.

With a wealth of experience in managing the sustainability of hazardous and non-hazardous waste, KpH will provide the best solution to collect, transport and correctly dispose of almost any waste stream.

All waste is handled by competent operatives and/or trained chemists who have the necessary skills and equipment to prepare, transport and dispose of waste safely and in accordance with current legislation. Full environmental paperwork

is provided to confirm that waste has been legally disposed of at a licensed treatment facility.

When dealing with hazardous, high-risk situations, the waste may need to be sampled and analysed to identify a disposal route. In such situations, prior to commencement, a site meeting can be arranged to discuss the safe method of works in greater detail.

## Waste Management

### Hazardous & Liquid Waste

KpH will safely and efficiently dispose of all hazardous and liquid waste, including drummed or containerised waste, offering a full waste disposal solution to meet the needs of any situation.

Services include:

- Waste or contaminated fuels (diesel, petrol, paraffin, mixed fuels)
- Waste oils, such as soluble, cutting, engine, hydraulic, lubricating, gas oil, and heavy fuel (HFO)
- Fuel or oil contaminated water
- Tank cleaning washings
- Pharmaceutical waste
- Chemicals
- Acids or Alkalines
- Solvents, paints and thinners
- Manufacturing process effluents
- Sewage
- CCF refrigerant disposal
- PCB disposal
- Fuel contaminated absorbent rags, pads, granules, mats or booms
- Contaminated sand or spoil
- Nominally empty drums or containers

### Interceptor & Drainage Services

KpH Environmental offers a complete interceptor and drainage cleansing service for the removal of fuel, oil, contaminated water, sludge and silt, including the installation of interceptors and waste treatment systems.

Services include:

- Jet washing/cleaning of interceptor units and connecting drainage or gullies
- Sampling of interceptor waste and provision of supporting analysis
- Removal of heavy sludge or silt by deep lift combination units
- Drain and sewer water jetting/cleaning
- Medium or high volume jet vac combination units with deep lift facility
- Pump station maintenance and cleaning
- Culvert and ditch cleaning
- Provision of suitably trained confined space personnel and equipment to enter interceptors and remove large solid debris or carry out a visual inspection
- Drainage CCTV survey and investigation works, providing written reports with remedial suggestions and supporting video, CD or DVD footage
- Installation of interceptors, septic tanks, grease traps, cess pools
- Drainage installation or remedial works
- Coalescent filter maintenance

### Other Waste Removal Services

- Collection and disposal of batteries, lamps and fluorescent tubes
- Collection and disposal of refrigerators or freezer units
- Collection and disposal of WEEE equipment (waste electrical and electronic equipment)
- Collection and disposal of waste tyres and wheels
- Gas cylinder/canister collection and disposal
- Asbestos surveys, sampling, reporting, removal and disposal
- Oil spill response and clean up service
- Land/soil remediation
- Grab hire or muck away
- Land and site clearance works
- Redundant plant or equipment collection and disposal
