

Health and Safety Bulletin - Covid-19 Edition

#loveconstruction

Nothing could be more important right now than the Health, Safety and Wellbeing of our staff and site personnel.

The entire organisation is committed and dedicated, whether it be through changing mindsets and behaviours or through innovation, to achieving the highest standard of Health and Safety on our sites. We have detailed a few examples of our approach to working on site alongside the Covid-19 threat.

KpH Innovate to reduce dust

In response to the industry wide shortage of RPE, KPH have responded through innovation. Whilst Dust Suppression systems are nothing new, they can be costly. We looked at various ways we could improve on the current hand pump systems and our logistics co-ordinator Alex Terinte came up with this idea. It allows us to spray a fine mist powered via site temporaries, over a wider area and is portable. This is a perfect solution when working on refurbishment projects avoiding the risk of saturation.

ADDITIONAL COVID-19 MEASURES

All Site Personnel and visitors have their temperature taken with an Infrared Thermometer before they enter site.

Increased Hygiene and Cleaning on site

Covid-19 Awareness Posters translated in multiple languages for better understanding

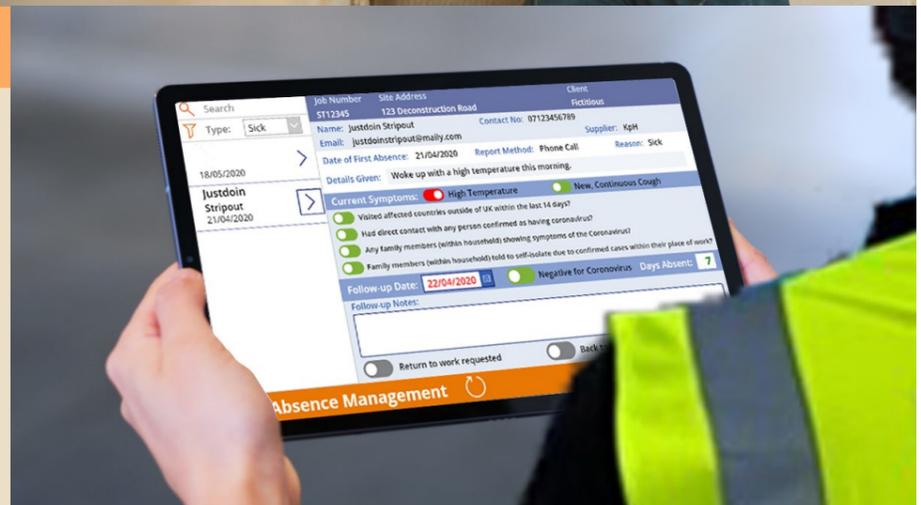

In-House, Innovated "contact free" hand washing basins through the use of a foot pedal. Completely portable for use across the site where required

KpH Launch Covid-19 Absence Management App

Our Covid-19 Absence Management Application is built to help us manage a new way of working and monitor the health of our Site Workforce. It allows us to:

- Track all absences from our sites (including Sub Contractors & Supply Chain)
- Record & monitor details of individuals symptoms
- Ability to Identify trends
- Identify & trigger onsite deep clean protocols
- Manage return to work requests
